Education

Indiana University Bloomington — Bloomington, IN
MS in Computer Science, GPA: 4.0/4.0 — *Expected May 2027*

Indiana University Bloomington — Bloomington, IN
BS in Computer Science, GPA: 3.9/4.0 — *Aug 2022 - May 2026*

- **Relevant Coursework:** Data Structures & Algorithms, Software Engineering, Machine Learning, AI, Data Mining, Operating Systems, Networks
- **Honors:** Graduated Highest Honors, Dean's List, Hutton Honors College, Provost's Scholar, Luddy Dean's Academic Merit Scholar

Skills

Programming Languages: Python, Java, JavaScript, C#, TypeScript, R, SQL, Kotlin, Swift, C++
Frameworks & Tools: Spring Boot, Apache Kafka, React, Next.js, .NET, Node.js, REST API, Maven, Git, Docker, AWS, GCP

Experience

Charles Schwab — Austin, TX
Software Engineering Intern | Java, Spring Boot, Apache Kafka, GCP — *May 2026 – Aug 2026*

- Supported the Enterprise Middleware Kafka platform serving the entire enterprise, contributing to event-streaming architecture across many clusters and environments processing **1B+ events** per day.
- Designed and developed a full-stack revamp of a platform portal, delivering 45 tracked stories across 5 feature areas including client-side search/filter, an analytics dashboard, and a secure streaming data-export system.
- Shipped the revamp to production through the full delivery lifecycle: CI/CD, multi-environment promotion, and formal enterprise change management.

Sallie Mae — Indianapolis, IN
Software Engineering Intern | C#, .NET, Python, Java, AWS — *May 2025 – Aug 2025*

- Developed a .NET CLI tool adopted by **300+** internal developers to streamline GitHub Copilot adoption and customization.
- Boosted engineering productivity by **60%** by automating workflows and improving Developer Experience across **40+** teams.
- Contributed to an Agile team using Azure DevOps, Git, and PRs on tech initiatives behind **$20B+** in student loans, introducing AI-driven tooling concepts that sparked new internal initiatives.

Shopwave — London, UK
Software Engineering Intern | React.js, TypeScript, SQL, Next.js, REST API — *May 2024 – Apr 2025*

- Independently developed a full-stack BI dashboard from scratch at a London-based commerce startup, used by clients like **Deliveroo** and **COOK** across **500+ store locations**.
- Visualized sales, product, and employee data with dynamic reports and an integrated GenAI assistant for strategic insights.
- Earned **post-internship extension** after MVP success led to **3+ clients** requesting go-to-market deployment, delivering iterative releases in a fast-paced Agile environment using Jira for clients with **$2B+** in annual revenue.

Undergraduate Instructor — Bloomington, IN
Indiana University | Intro to Artificial Intelligence — *Jan 2025 – Present*

- Support **100+ students** through lectures, office hours, and exam prep, covering core AI topics such as search algorithms, machine learning, and probabilistic reasoning.
- Grade assignments, exams and projects with detailed feedback, fostering student growth in logic and decision-making.

Undergraduate Research Assistant — Bloomington, IN
Indiana University | AI and Online Book Reviewing — *Aug 2025 – Present*

- Conducted qualitative and computational research on how AI reshapes cultural production, such as literature and digital media.
- Published my authored research poster at **DH2026** (Daejeon, South Korea), the flagship international conference for digital humanities.

Projects

Youlists - Full-Stack AI Playlist Generator | *React, TypeScript, Firebase, Tailwind, Vercel, OpenAI API* — Jan 2025 - Oct 2025

- Architected a full-stack playlist generator in React and TypeScript with a Firebase backend, using OpenAI to turn natural-language prompts into structured song recommendations resolved against the Spotify Web API into real, playable playlists.
- Implemented Spotify OAuth and Firebase authentication, playlist persistence, and interactive customization, deployed on Vercel with continuous deployment.

Tailor - Resume Tailoring Toolkit | *Python, FastAPI, JavaScript, Chrome Extension APIs, LaTeX* — June 2026 - Ongoing

- Built an open-source tool pairing a Chrome extension with a local Python/FastAPI server that parses job descriptions and generates tailored LaTeX resumes and cover letters matched to each posting.
- Designed a local-first client-server architecture where the extension scrapes posting data in-browser and delegates document generation to the local API, keeping all user data on-device.

Solar Cyberdeck - Off-Grid Linux Portable Computer | *Linux (Arch), Raspberry Pi 5, Bash, systemd, Solar/DC Power* — Spring 2026

- Built a self-contained, solar-powered portable computer on a Raspberry Pi 5 running Arch Linux, configuring the system from a minimal base install to a fully functional off-grid environment.
- Developed a local monitoring service exposing real-time battery, temperature, and load metrics over a web dashboard, with Bash and systemd automation tuned to an off-grid solar power budget.

Leadership

Google Developer Student Clubs at Indiana University — Bloomington, IN
President — *Nov 2023 - Present*

- Lead a 400+ member tech community, hosting 20+ events, building industry partnerships, and finalist for Student Leader of the Year.

Luddy Hackathon — Bloomington, IN
Organizer/Co-Founder — *Dec 2023 - Present*

- Co-founded IU's Luddy Hackathon, scaling it into a university-sponsored competition with 300+ attendees and $10,000+ in sponsorships
